SUMMARY

Software engineer specializing in scalable systems, API design, and data architecture. Experienced with Ruby on Rails and Next.js, building resilient, high-traffic platforms with robust testing, CI/CD pipelines, SSO integration, and payments. Focused on designing maintainable architectures and reliable APIs to support performance, security, and rapid delivery.

WORK EXPERIENCE

Devsinc
Software engineer, Lahore **Jan 2026 — Present**

- Enhanced expertise in full-stack development, system design, and production grade software engineering while working on large scale applications.
- Helped build a platform that simplifies the process of responding to debt collection lawsuits by automating legal document preparation and filing.
- Worked across the full stack using **Ruby on Rails** and **Next.js** to develop scalable features and improve the overall user experience.
- Acted as a technical contributor in code reviews, system design discussions, Implemented **Playwright-based end-to-end testing**, improving overall product stability by identifying issues early in the development cycle and reducing production bugs.
- Refactored and normalized a JSON heavy data model into well structured relational tables, significantly improving query performance, scalability, and maintainability.

Infinikorn
Software Engineer, Lahore **Jan 2025 — Jan 2026**

- Contributed to the end-to-end development of two major projects: **EOB-PARSER** and **QABABOARD-WEB**, with a focus on backend architecture and systems integration
- Integrated **webhooks** and third-party services such as **PayPal**, enabling real-time communication and secure payment processing. Developed and maintained comprehensive **RSpec test suites** to ensure high code quality, reliability, and test coverage.
- Refactored legacy code to improve performance, scalability, and maintainability using best practices in object-oriented programming and design patterns.
- Worked with **PostgreSQL**, **Redis**, and **Sidekiq** to manage data efficiently and handle background jobs for improved performance.
- Deployed and managed applications using **Kamal**, streamlining container-based deployments with zero-downtime rollouts. Utilized **Solid Queue** for background job processing, improving reliability and performance in asynchronous task handling.

BlackStack Software Solutions
Associate Software Engineer, Lahore **Apr 2024 — Dec 2024**

- Developed secure URL-sharing functionality within Ruby on Rails applications, ensuring easy access for end-users without requiring authentication, improving accessibility and engagement.
- Designed and optimized RESTful API endpoints in Rails with detailed response attributes and comprehensive error handling, leading to an enhanced real-time data experience.
- Collaborated on token-based authorization strategies using JWT, supporting seamless data sharing while maintaining strict data security and privacy protocols.
- Spearheaded database enhancements by implementing cleanup procedures for unused records, improving storage efficiency and reducing server load.

EDUCATION

Punjab University College of Information and Technology, **Lahore** - *Bachelor of Science, Information Technology* - *(GPA: 3.37/4.00)* **May 2020 — May 2024**

AWARDS

Employee of the Month, BlackStack Software Solutions, Lahore **Jul 2024**

Honored for exceptional performance as a Ruby on Rails Developer, demonstrating strong technical expertise, consistent delivery within project timelines, and effective collaboration across cross-functional teams. Contributed to delivering high-quality solutions that enhanced product performance and user experience.

PROJECTS

SoloSuit(Ruby on Rails, Next.js)

- Worked as a full stack developer with a strong focus on system architecture, Redesigned key parts of the database schema by replacing deeply nested JSON structures with properly normalized tables, making the data easier to manage, query, and extend.
- Maintained frontend features in Next.js, focusing on performance, usability, and smooth integration with backend services.
- Refactored the document processing workflow by shifting from direct uploads to Python APIs to an **S3-based pipeline**
- Added **Playwright** and **RSpec** tests to catch issues early and keep the app stable.

QABA Board (Ruby on Rails, Next.js)

- Worked on a **Rails** and **Next.js** app for certification management and exam delivery. Implemented exam enrollment workflows, multi-step forms, document uploads, and payment processing. Integrated Stripe and PayPal with webhook handlers for automated payment processing.
- Created automated exam scheduling that handles time zones and sends calendar invites.
- Developed coursework provider application system with approval workflows.
- Maintained APIs connecting the Rails backend with the Next.js exam platform

EOB-PARSER(Ruby on Rails)

- Developed a full-stack Ruby on Rails application for parsing and extracting data from PDF and Excel files.
- Utilized Rails gems and advanced regex matching techniques to extract relevant data accurately and stored structured data in the database.
- Implemented AG Grid to display parsed data in an interactive and user-friendly format.
- Enhanced the application by implementing third-party OCR APIs to accurately extract data from diverse PDF formats, eliminating the need for complex and error-prone regex processing.

HOUSEPOINT-API(Ruby on Rails, Next.js, GraphQL)

- Worked on a full-stack web application with a backend in **Ruby on Rails** and **Next.js** for the frontend. I built and maintained a GraphQL API to fetch the necessary data as needed, ensuring smooth and efficient communication between the backend and frontend.
- Integrated **Single Sign-On (SSO)** with **Google**, **Clever**, and **ClassLink** to simplify and secure user login
- Focused on keeping the codebase clean, well-organized, and easy to maintain by following structured approaches and regularly improving code quality.

SKILLS

Programming	**:**	Ruby, Next.js, JavaScript, Python, C++, C#, Kotlin
Web Frameworks	**:**	Ruby on Rails, React.js, .NET, Flask
Databases	**:**	MySQL, PostgreSQL, Oracle DB
Development Tools	**:**	Git, GitHub, Proto.io, Apex Oracle
Software Development Practices	**:**	Object-Oriented Programming, DSA, HTML, CSS, TAILWINDCSS, MATERIAL UI, SQA, MVC, GraphQL
